

FEATURED PROJECT

S.R. 0061, Section 14M, Schuylkill County, PA PennDOT District 5-0

Overview: AWK started by completing a 4-mile traverse and level loop, to establish survey control for the length of the project. Aerial mapping edits were a large portion of the survey effort, where AWK added features that could not be accurately located or determined by aerial mapping techniques. Obscure area surveys were a major effort on this project as there were many areas where the aerial LiDAR mapping could not penetrate the dense foliage to the ground surface. AWK also surveyed specific project features, such as wetland flags, streams, bridges, culvert, headwalls, retaining walls, rock outcrops, subsurface utilities, storm water mitigation areas, and wetland mitigation areas.

Services provided: Surveying
